This Modern Electric start is designed and manufactured in the USA as a retro fit item for the original Indian Chief Motorcycle.

It is imported into the Uk by Indian Motorcycle classics and distributed through their website "IndianMCC.com" where you can find the contact details.

It retains the original chain guard and maintains the original look and feel of the motorcycle with all the advantages of starting the bike at the push of a button.

Features;

- Easy installation (does not require removal of kick-start pin).
- Fits neatly under chain guard and looks part of the original design.
- High torque gear reduction starter.
- High end ball bearing/keyed/sealed Spag clutch.
- Partial gear/chain drive. Gear primary drive for torque reduction and positive engagement.
- Chain final drive allows for frame misalignment.
- Battery remains in same position as stock.
- Neutral safety switch.
- American made and engineered.
- Starter Button.

Contact Indian Motorcycle Classics for prices and more information.
